How to setup Wi-Fi

1. First you will need to find out what is your camera IP address. To do this please install Search Tool:
   https://domar.com/download/TECH_PAGES_FILES/IPC/SearchTools/IPSearchTool_8.2.11.5.exe
   After installation please run software and click "**Refresh**"

You can also choose to find only IP Cameras in your network by clicking on "**ALL**" and select "**IPC**"
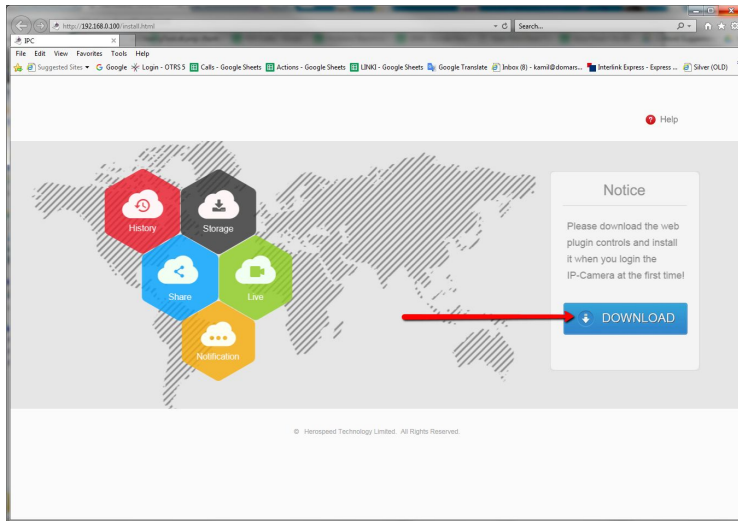

Run "**Internet Explorer**" Browser and enter camera IP address on address bar.

!NOTE!
If you have Windows 10 please make sure you find and run "**Internet Explorer**". As a default your Windows 10 have "**Edge**" Browser that have very similar icon to "**Internet Explorer**"

2. Install OCX from camera if needed.

At the bottom you will see message. It will ask you what you want to do. Please click "**Run**"

After downloading it will automatically start to install OCX.
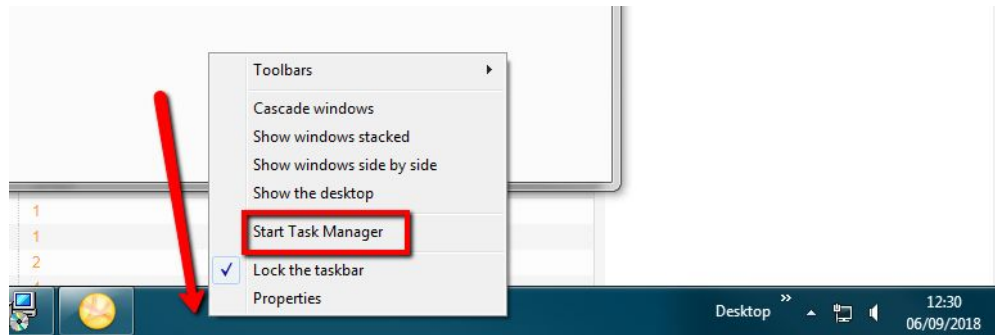

!NOTE!

Sometimes it will ask to close "**Internet Explorer**" to continue installation.
You will see this message:

Just close your browser and click "**Retry**" If you can't perform installation than probably your Browser is working still on background and you need to close process. To do this please follow this steps:

a) Right-click on Taskbar and select "**Start Task Manager**"

b) New window will open.

For Windows lower than 10 - Under processes tab please find and select "**iexplorer**". Click on "**End Process**" and confirm ending process.

For Windows 10 - Please expand "**Background Processes**" find and click "**Internet Explorer**". Click on "**End Task**"

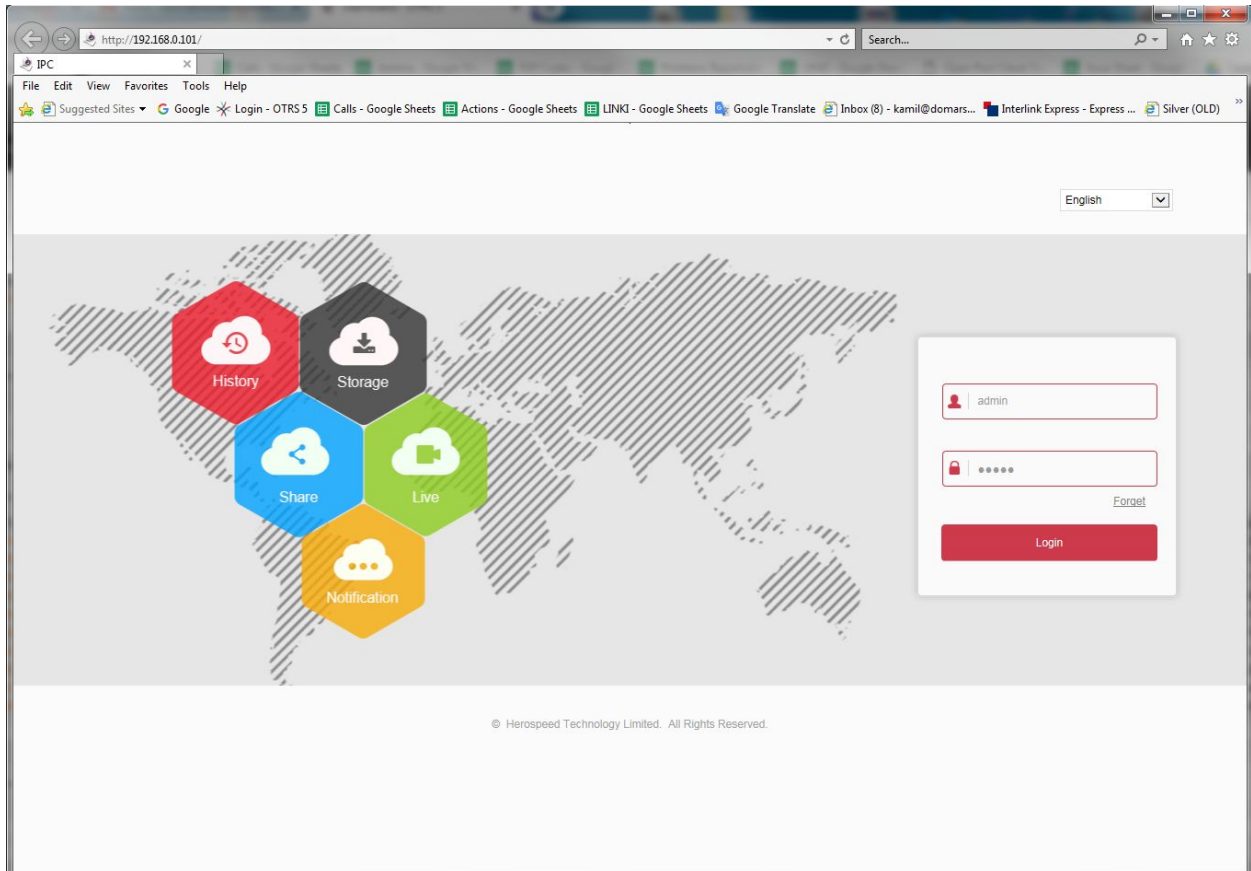

Now you can install your OCX. You should see this window:

Please go trough installation process and reopen your "**Internet Explorer**" and enter camera IP again.
3. If you manage to install OCX you will need to do one more thing. On top right corner click on gear icon "**Tools**" . Choose "**Compatibility View Settings**" and add camera IP address to the list. Page should refresh itself and you should see this now:

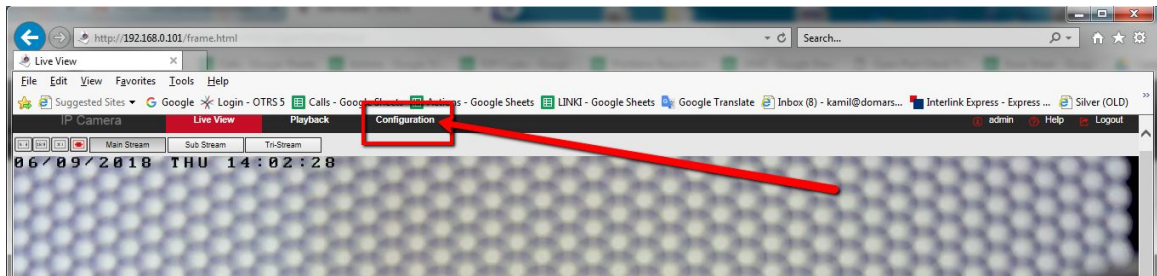

Enter username "**admin**" and password "**admin**", click "**Login**"

Camera will suggest to modify password. Click on "**Modify**" button if you decide to do it or click on "**After 60 Mins**" if you decide not to.

We recommend to change password for your camera on the first login attempt for more secure system. You can also leave it as a default to make easier setup.

4. When you login again to your camera please click on "**Configuration**" at the top.

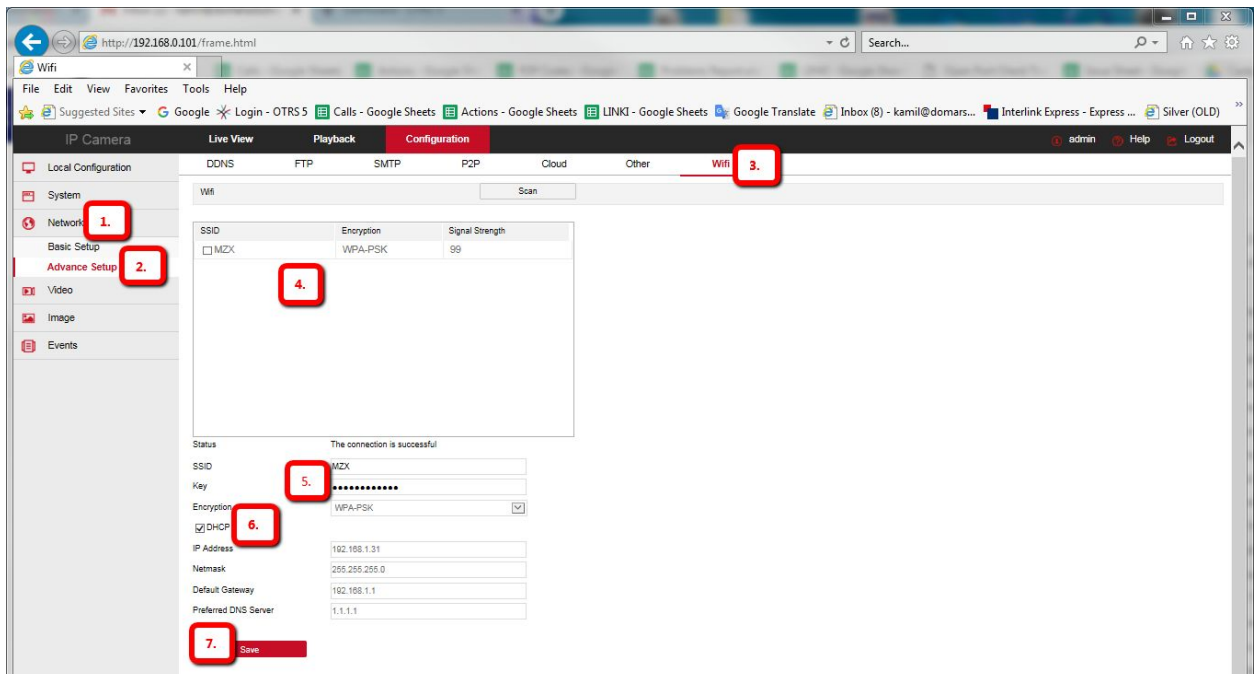

5. Now please do as follow:

On left side please click on "**Network**"**(1.)** and choose "**Advance Setup**"**(2.)**. On top please select "**Wi-Fi**"**(3.)**. Select your Wi-Fi name **(4.)** - if you don't see your network name please click on "**Scan**". Enter password for it on "**Key**" box **(5.)**. Make sure you will select "**DHCP**"**(6.)** "**Save**"**(7.)** your settings.

!NOTE!

If you don't see "**Wi-Fi**" settings or "**Save**" button please zoom out your browser. To do it please click on gear icon "**Tools**" on top right, choose "**Zoom**". Now change zoom for 50% or 75%.

6. To make sure you enter correct password for your Wi-Fi please wait around 30-60 sec. Click on"**Advance Setup**" and choose "**Wi-Fi**" again - if you do not see any settings after clicking "**Wi-Fi**" please wait until page will fully load. Your "**Status**" should say "**The connection is successful**".

   !NOTE!
   Please note that IP address of your camera has been changed. This is because your camera have two network cards:
   One for LAN (wire) connection and one for Wi-Fi (wireless) connection.

7. To finish your Wi-Fi setup please unselect "**DHCP**" under "**Wi-Fi**" option. This will prevent your router to change IP address in the future.

   !NOTE!
   If you adding your camera to NVR please make sure that you use Wi-Fi IP address for this connection.

Hope this will help. If you need any more questions please email us on techsupport@domar.com
